

## **UCSD ADRC request for brain tissue or biosamples**

The Shiley-Marcos ADRC has stored brain tissue and biosamples, including plasma and cerebrospinal fluid (CSF) from well-characterized research participants, and encourages research efforts that make use of these biosamples.

We also have banked fibroblasts (frozen) on a small number of subjects. If you have questions regarding this form or the samples available, please contact Dr. Robert Rissman, Director of ADCS Laboratory and Biospecimen Bank ([rrissman@ucsd.edu](mailto:rrissman@ucsd.edu)).

To allow us to consider whether and how we may be able to respond to your request, we require that you complete the following questionnaire:

Name of person requesting biosamples

Email

Address

What biosamples are you requesting?

What do you propose to measure using these samples?

Do you have a mature assay or method available, or are you planning to use the ADRC samples for method development feasibility?

What hypothesis will you test using these samples?

How is your research on these samples being funded?

How many samples are you requesting?

Do you need additional data other than age, sex and diagnosis? If so, please describe.

Do you plan to share your results with the ADRC?

Do you require statistical help to analyze your data?
